WHITE TUSKER
PRIVATE LIMITED

FEATURE SET

Hamper Builder

Hamper costing, client quotations and presentations in one place, replacing the costing spreadsheet with a system the whole team can trust.

LATTICE LANE
HOUSE OF GIFTING
UNIT OF PALM LENGTH LLP

PREPARED FOR
Lattice Lane — House of Gifting

PREPARED BY
White Tusker Private Limited, Bengaluru

DATE
October 2026

AT A GLANCE

From a product's cost to a client's presentation, in one flow

Every number the sales team quotes traces back to the product's cost sheet, and every price is worked out the same way, every time.

PRODUCTS
Product Master
Codes, categories, sources and photos

→

COSTING
Cost calculator
Six cost stages build each product's price

→

HAMPERS
Hamper builder
Pick products, see cost, price and margin live

→

SELL
Quotes and PIs
Printable quotations and proforma invoices

→

PRESENT
Presentations
Designed client slides, exported to PDF or PowerPoint

No limit
on products per hamper or hampers per quote (the sheet stopped at 15 and 10)

3 roles
Sales, Manager and Admin, enforced in the database

30 days
to restore anything deleted from the Recycle Bin

PRODUCT MASTER

Every product, its cost and its photos, in one catalogue

- **Product codes and categories**, each category with a two-letter code and colour
- **Sources**: In-house, Outsourced or Hybrid
- **Product statuses**: Draft, Approved, Active, Discontinued
- **Photos** uploaded straight to storage; originals kept for presentations, light copies for browsing
- **Filters apply as you type or pick**, and long lists load 20 rows at a time
- Cost prices visible to the whole team for quoting; editable only by admins

CATEGORY COUNTS

Count what the client counts

Each category can be set to count, or not, towards a hamper's number of items, so packaging and fillers don't inflate the item count on a quote.

BULK IMPORT

Bring the spreadsheet across

A guided importer reads the old sheet's tabs, does a dry run first, updates rather than duplicates on re-runs, and continues numbering from the highest existing code.

COST CALCULATOR

Build each product's cost from what it's really made of

COST STAGE	HOW IT'S PRICED
Material	By dimension · e.g. wood-based, acrylic, glass, mirror, leather
Hardware	By dimension · e.g. magnets
Finishing	By dimension
Machine cost	By time
Bought-out items	From the rates list
Miscellaneous	Free-text line: name, rate, quantity

- **Four-level rates hierarchy**: Stage → Category → Subcategory → Variety, picked from dropdowns
- **Overhead % per stage**, shown and editable on the cost sheet
- **Markup % and colours** for product variations, without one colour overwriting another
- **Rates and hierarchy** managed centrally, so every product uses the same rates
- **Bulk repricing** when rates change

HAMPER BUILDER

Put a hamper together and see the margin as you go

- **Pick a product and the row fills itself**: cost price, selling price, category
- **Live totals while you type**: cost, base selling price, discount, gross profit, margin and number of items
- **Final catalogue price** is yours to set, and price refreshes never overwrite it
- **Saved hampers keep their prices**; they re-sync only when someone runs Refresh Prices, with a preview first
- **Duplicate** makes a true copy to start a variation
- **Designed hamper picture** made in the photo editor, shown as a thumbnail in the hamper list

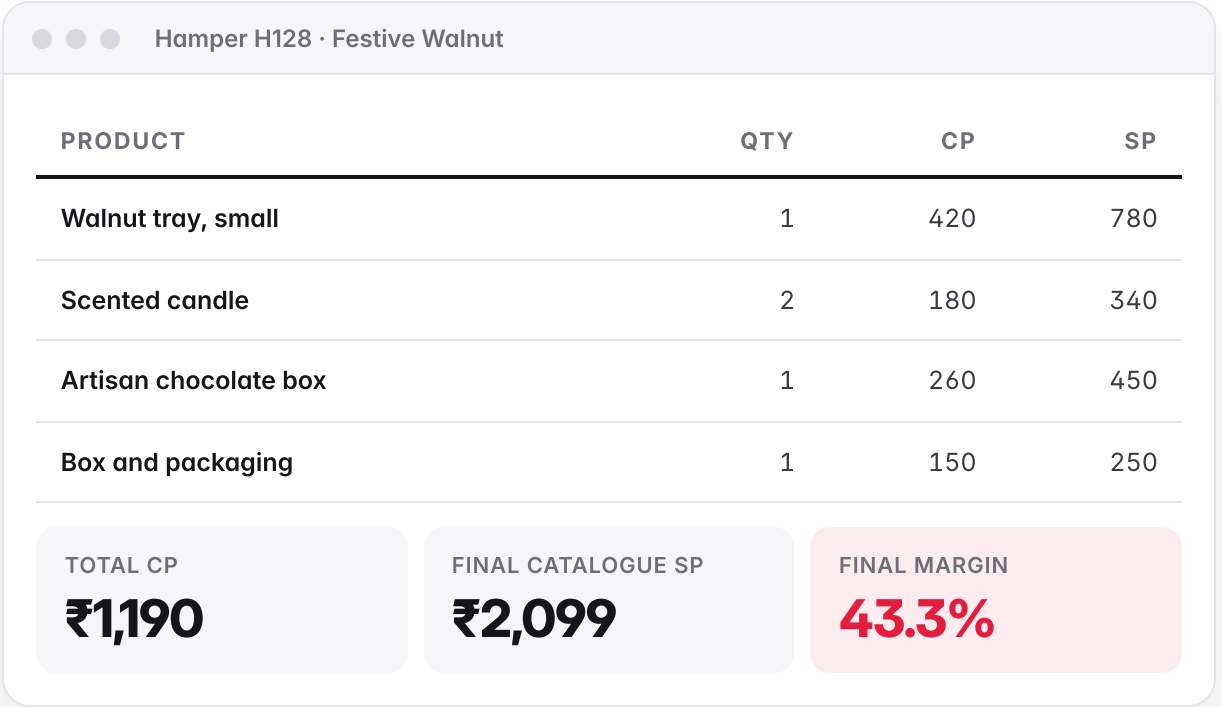

Illustration of the screen. Figures are sample data.

PRICING YOU CAN AUDIT

One set of formulas, used everywhere

The same rules run in the browser for live totals and in the database once saved, so the screen, the quote and the report can never disagree.

HAMPER

```
total CP = Σ qty × unit CP
base SP = Σ qty × unit SP
SP after discount = base SP × (1 − discount)
gross profit = final catalogue SP − total CP
final margin = gross profit ÷ final catalogue SP
items = Σ qty where the category counts
```

QUOTATION

```
final rate = catalogue price × (1 − discount)
amount = qty × final rate
taxable = subtotal − discount + adj 1 + adj 2
grand total = taxable × (1 + GST rate)
```

Every formula is checked by automated tests against a hamper worked out by hand.

QUOTATIONS AND PROFORMA INVOICES

Professional documents in minutes, still editable after they're sent

- **Client master**: company, contact, GSTIN, address and bank details; the address is copied onto each document as sent
- **Quotation → proforma invoice** in one step
- **Document numbers** that never collide: H### for hampers, LLQT-### for quotes, LLPI-### for proformas
- **Pipeline status**: Draft, Sent, Negotiation, Won, Lost, Expired
- **Follow-up dates**, with follow-ups due on the dashboard
- **Printable PDF** for every quotation and proforma

ORDER STRUCTURE

Combined order or options

Combined Order | Option Based

DETAIL MODE

Show as much as the client should see

Show Contents | Summary Only | Hide Contents

PACKAGING

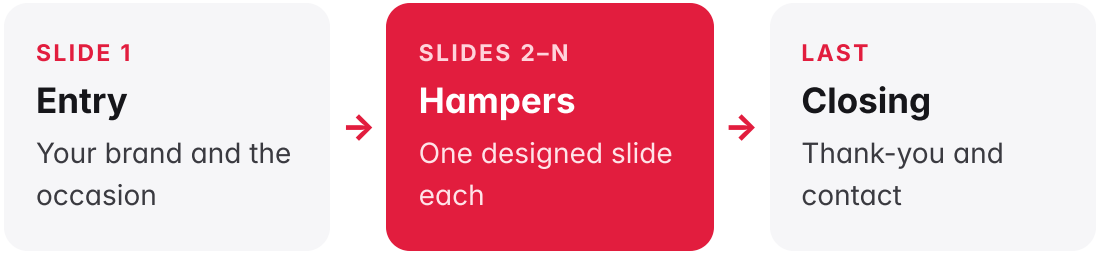

Handle packaging your way

Absorb into box & packaging | Charge separately | Show as line item

PRESENTATION STUDIO

Client-ready slides, designed in the browser

- **Pick hampers and products**; the deck builds itself: an entry slide, a slide for each, and a closing slide
- **Photo editor** on every slide: text, elements, product photos, your uploads and backgrounds
- **Layers, shadows and filters**, plus one-click **background removal** for product photos
- **Reorder slides** freely
- **Print or save as PDF**
- **Export to PowerPoint** with the wording kept as editable text boxes

The same editor designs hamper pictures

A hamper's designed image is saved with it, and editing the hamper's items keeps the design intact.

DASHBOARD AND HOUSEKEEPING

Today's pipeline at a glance, and nothing lost by mistake

01

Dashboard

Active products, saved hampers, open quotes and open value, follow-ups due, and recent hampers and quotes.

02

Refresh prices

When costs change, preview the effect on every saved hamper before applying it.

03

Recycle Bin

Deleted hampers, products and photos can be restored for 30 days, then are cleared automatically.

04

Clients

Search by company name or GSTIN and pick the client straight onto a quote.

05

Settings

Categories, pick-lists, numbering, GST, bank details and proforma terms in one place.

06

Stays current

If a newer version is released while a page is open, the app prompts a quick refresh.

ROLES AND SECURITY

Everyone sees the costs; only the right people change them

PERMISSION	SALES	MANAGER	ADMIN
Create quotations, edit their own	●	●	●
Edit anyone's quotation, change status	○	●	●
Build and edit hampers, approve final prices	○	●	●
Product Master and cost prices	○	○	●
Settings, users, import, price refresh	○	○	●

- **Enforced in the database** with row-level security, not just hidden on screen
- Everyone signed in can read costs, because sales needs them to quote
- The first account becomes the admin; everyone after starts in Sales
- Password reset by email

PLATFORM

Fast on the web, at home on the desktop

01

Web app

Runs on Cloudflare's global network next to the database, with product thumbnails cached for speed.

02

Windows desktop app

Installs like any app and updates itself: it asks first, shows progress, then offers Install now or Later.

03

Reliable data

Postgres with sign-in, file storage and row-level security. All pricing lives in database views, so it can't drift.

QUALITY

Tested where it matters

Automated tests cover every pricing formula and the spreadsheet import mapping, including quotes whose totals disagreed with their own lines.

DEPLOYMENT

Push to release

Changes go live from the main branch through an automated build, with no manual uploads and no secrets on laptops.

WHITE TUSKER
PRIVATE LIMITED

NEXT STEPS

Ready when your team is

- Import your current spreadsheet and check every hamper's numbers side by side
- Set up users, roles, categories and numbering with your team
- Install the desktop app for the sales team
